

Introduction

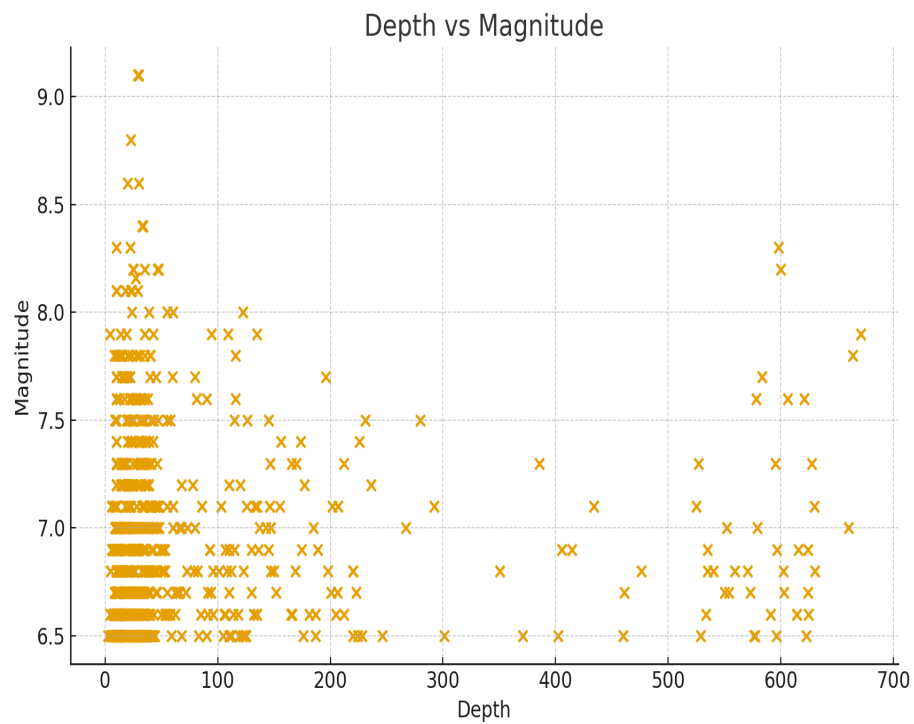

This dataset contains information on earthquakes, including magnitude, depth, and whether they triggered tsunamis. We investigate the distribution and relationships among these variables.

Plot 1 Discussion

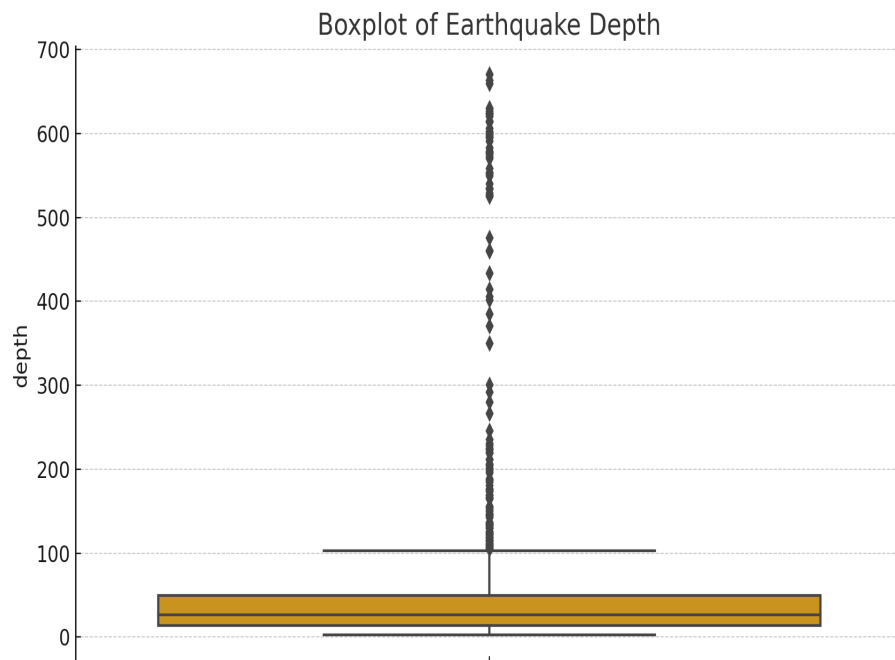

The histogram of earthquake magnitudes shows the distribution of magnitudes. We can observe clustering around certain values.

Plot 2 Discussion

The scatter plot shows the relationship between depth and magnitude. Trends or patterns can be analyzed.

Plot 3 Discussion

The boxplot of earthquake depths shows the spread and presence of outliers.
